

MATTHEW MILNE

matt_milne@outlook.com | 0490 815 561

Ambitious developer and data scientist with a strong quantitative background and deep experience building automated data systems, analytical pipelines, trading infrastructure, and production web applications. Skilled across Python, SQL, cloud infrastructure, backend development, financial modelling, and applied analytics. Strong track record of turning complex business and technical problems into scalable systems that improve decision-making, automation, and operational efficiency.

SKILLS

- Strong Python and SQL skills across backend systems, automation, data pipelines, analytics, and production datasets
- Experience in machine learning, statistical modelling, optimisation, financial modelling, and real-time analytics
- Practical infrastructure skills across AWS, Linux, Git, APIs, WebSockets, MySQL, and deployment workflows
- Full-stack product development experience across web apps, analytics platforms, and user-facing software
- Strong communicator experienced in stakeholder management, analytical coordination, and production delivery

EXPERIENCE

Senior Data Analyst

Westpac Group — *July 2025 – Present*

- Lead developer responsible for maintaining core analytical datasets for Project Eagle and OST — Online Share Trading.
- Built and maintained an automated data model that combines information from multiple Westpac tables, systems, and databases into reliable analytical datasets.
- Coordinate daily analytical and data processes across the team, ensuring accurate, timely, and efficient delivery of insights.
- Provide ongoing analysis, data validation, and process improvements that create measurable efficiency benefits for the team.
- Work across complex business logic, data quality checks, SQL transformations, and production analytical workflows.
- Act as a key technical resource for dataset design, issue resolution, automation, and analytical delivery.

Founder and Lead Developer

Sydney Quant Pty Ltd — *2024 – Present*

- Founded and operate a software and quantitative development business across trading systems, sports analytics, and consumer apps.
- Built Footylab.net, a production NRL/AFL analytics platform combining statistical models, betting odds, automated data pipelines, and user-facing web tools.
- Designed and deployed backend systems using Python, APIs, MySQL, AWS, scheduled jobs, and automated analytics workflows.

- Built profitable cryptocurrency trading systems using WebSockets, exchange APIs, real-time market data, order management, and automated execution.
- Developed and backtested medium-frequency strategies including mean reversion, market-making, Bayesian optimisation, and portfolio selection.
- Developed additional software projects including Mana Siege, Sum Hero, Clean Anything, Buzz Words, and a Tax Calculator.

Quantitative Analyst

Mercer Investments — *Sep 2023 – Feb 2024*

- Worked as a backend Python developer within a team building internal tools for investment operations.
- Developed the backend of a Python-based application that interfaced with an Excel GUI used by consultants and analysts.
- Designed and maintained data processing pipelines and business logic modules to ensure seamless user interaction and fast performance.
- Contributed to the automation of complex investment workflows, improving reliability and turnaround times.

Data Scientist

Westpac Group – Advanced Analytics — *Sep 2021 – Sep 2023*

- Built automated data pipelines to deliver website form and phone-number leads to bankers, improving speed, consistency, and operational efficiency.
- Developed backend processes using Python, SQL, and batch automation to support internal analytics and workflow tools.
- Built a PowerApps front end connected to automated backend processes for business users.
- Contributed to the creation of a customer lifetime value dataset using large-scale cloud data transformations and analytical modelling.
- Worked with stakeholders to translate business problems into automated data products and actionable analytical outputs.

Analyst / Senior Analyst

Westpac Group – Analytics and Insights — *Jan 2020 – Sep 2021*

- Delivered analytics solutions across data extraction, validation, reporting, automation, and stakeholder insights.
- Automated recurring ETL and reporting workflows using Python and SQL.
- Built reusable Python utilities to reduce manual analysis and improve team productivity.

Education

Bachelor of Business Honours

University of Technology Sydney — *2016 – 2019*

- Finance thesis: Are Managers Aligning Their Pockets? – Optimising Executive Remuneration Systems
- Weighted Average Mark: 83
